Advantages of Software as a Service

The benefits of subscribing to services built on a shared infrastructure

STANDARD IMAGING

Benefits of SaaS

Historically healthcare providers have been required to buy, build and maintain their IT infrastructures despite exponentially increasing costs. Software as a Service (SaaS) gives providers an alternative. Now, using a HIPAA secure portal, providers can subscribe to services built on shared infrastructure. The SaaS model has flourished in recent years because it offers benefits to providers of all sizes and needs.

Here's Why:

Lower Cost to Implement

SaaS applications are subscription based. Having no license fees results in lower start-up costs and eliminates the need for continuous upgrades/updates via the capital budget cycle. And, software as a service as with QA Pilot can be billed as an operating expense. Let Standard Imaging manage your TG-142 IT infrastructure, eliminating software, hardware and maintenance costs and freeing up your staff and resources for your important clinical needs.

Easy, Straightforward Access

The QA Pilot application is available from any computer or mobile device - anytime, anywhere. Using QA Pilot is as simple as opening an internet browser and logging into your account, allowing for higher adoption rates and a lower learning curve.

Seamless Upgrades

Using the SaaS model, QA Pilot will manage all the updates and upgrades without requiring any patches or downloads to install.

Vertical Integration

With the SaaS model, multitenant architectures (group of users sharing the same view on the software they use) can scale to meet customer demand. Standard Imaging provides customization capabilities to meet specific clinical needs. Using the provided API's QA devices and QA results can be integrated into QA Pilot.

Secure

Data is securely stored, double encrypted and password protected on Amazon® servers, meeting all HIPAA and EU compliance standards.
